

Please reject the NAB's petition 04-160. This is ridiculous! For those that have XM radio (and there are not that many), this allows us to get the information we need when we need it. Other stations don't broadcast this information enough and there are no channels on AM/FM that are dedicated to only weather or only traffic. This is like saying we're not going to allow the Weather Channel on cable because the news stations don't like it. BS! This is an on demand world. People need and want information at their finger tips, which is why the internet is so popular. Not allowing XM to broadcast news and weather is dead WRONG! It stifles competition which is good for everyone. I want to hear Atlanta traffic when I need it, not when the other stations get around to it (during prime time). Let XM radio run their business as they should.
